

ABSTRACT OF THE DISCLOSURE

A method that automatically calculates supplier/vendor scores and payable due dates by material delivery inspection is a system that combines material delivery and quality inspection. It utilizes a pre-determined formula through the Enterprise Resource Planning (ERP) server to calculate supplier/vendor scores and automatically announces the inspection score of supplier/vendor material delivery to further generate payable due dates uploaded to the enterprise end as the basis of the accommodation check period. It can synchronize respective facilities , reduce obstacles to communications, decrease a glut in the inventory of facilities, diminish the risk of purchasing materials from the enterprise end and increase the enterprise profits.
